***Reasons for Allowance***

1. The following is an examiner's statement of reasons for allowance: the prior art of record neither teaches nor suggests all of the claimed subject matter of claim 1 including power supply adjustment circuitry that receives a first selected clock signal and adjusts said level of VDD such that said maximum delay time of said critical path less than pulse-width duration between a first clock edge of said first selected clock signal and a second clock edge of said first selected clock signal immediately following said first clock edge; and the prior art of record neither teaches nor suggests all of the claimed subject matter of claim including adjusting the level of VDD such that the maximum delay time of the critical path is less than a pulse-width duration between a first clock edge of the first selected clock signal and a second clock edge of the first selected clock signal immediately following the first clock edge. Yamamoto et al. U.S. Patent 6,424,184 shows a similar invention however it does not show the limitations above, it just adjusts the voltage output from the delay so that the voltage substantially matches a minimum voltage required for external circuitry to be operable at the frequency of the clock.

2. Applicant is reminded that the specification must be modified to include the copending application numbers.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
